

Emma Goyne response

Community consultation

Community Consultation is vital to meeting the needs of our diverse Clarence - using Multi Tiered feedback sources like Community forums, social media surveys, print media surveys and always aiming to be open and approachable to the public to carefully consider both sides of each argument without bias to come to and be accountable for any decisions that are required to be made to fulfil the role of an elected Voice for the People.

Climate Change

Immediate action topics discussed already with residents are , Improved stormwater infrastructure to cater for those already inhabiting Clarence and future proofing any new developments so that adequate infrastructure is in place BEFORE any development is approved.

Improved waste reduction/ management and disposal.

I would also advocate for council to be more proactive on bushfire management ,

Including ensuring fire/flood/drought tolerant native species that are suited & sensitive to the flora & fauna that inhabit those areas- seeking guidance from the traditional owners of this land who have implemented sustainable management practices best suited to our unique environment since the beginning of time

Public Land

Should not be sold to overseas investors- we need Local developers to ensure our key assets provide recreation or resources for our own community.

We need to future proof legislation as to the sale of key Community Assets so that the community will be adequately represented in any future decisions before property is sold.

We need to buy back Kangaroo Bay whilst we still have the chance !

Urban Growth

Insufficient infrastructure, roads, stormwater and waste management are already key failings of council.

Until such time as the current needs of ratepayers are being met at a basic and reliable level , urban growth must be limited Unless we can cater to these core needs council cannot sustain further growth.

Being mindful to address housing shortages especially homelessness with the rising cost of living.

Ferry service

I support the ferry service between Hobart and Bellerive, but would need to be fully briefed with expert advice as to the cost and feasibility for parking solutions for users of the service so as to not further impact the local residents.

Your key issues

Not so much new initiatives as just ensuring promises made by council are kept , basic needs are met and our area is future proofed in regard to our ever changing environment and community needs- catering to the diversity of the population of Clarence and all of its users in a safe and inclusive manner.

Being the impartial voice of the people , accepting information from both sides before making an informed and educated decision as to how best to Serve as a Voice for the people of Clarence and working with my fellow elected members to ensure every opinion is heard in a respectful manner
